Operation Modes

Rapid Fry Mode – Rapid Fry mode automatically begins cooking the next batch of food items when the preceding batch is finished. Minimum staff time, minimum handling, minimum prep time – maximum efficiency.

Preset/Preset Locked Modes – Preset modes take the guesswork out of deep frying by allowing the operator to pre-program up to nine different food items into the electronics system. Simply choose the preset number that corresponds to the item you wish to cook.

Manual Mode – Operators load food products into the Rapid Fryer and enter the cook time to begin a cooking cycle.
