It's about doing what's right for your business

"As technology advances, we must understand those advancements and how we can use them to improve our daily lives. Suddenly, old concepts about traditional products no longer apply."

A handwritten signature in black ink, which appears to read "Vincent Illiano".

Statistics show that more than 80% of kitchen burn injuries result from contact with boiling water, steam, hot grease or hot oil. With the cost of keeping your most valuable employees, (not to mention insurance and Workers' Compensation claims), climbing out of control, wouldn't you want to do whatever it takes to protect them? The importance of offering a safe and happy workplace means you should never shop for protective apparel based on the cost alone. That would only result in using the same old inexpensive, consumer-level oven mitts that burn up and fall apart, often after a few days in commercial service. This is the very reason that Tucker Safety Products, Inc. came into existence.

Tucker Safety Products is celebrating 20+ years as an established leader in the research, design and manufacture of the most effective protective apparel. The Tucker Safety Products approach has been successful due to our expertise in the food service industry and our commitment to analyzing each client's needs individually. Our four key foundational elements: Safety, Sanitation, Savings, and Service, add up to the highest level of protection possible for every aspect of your operation.

The Experts in Foodservice Protection

It's About Safety

Protect your staff...

Your staff is a valuable component of your business. With Tucker Safety Products and programs at work in your operation, your employees will feel valuable and be protected. This will lead to improved performance and safety compliance.

It's About Sanitation

Protect your customers...

Somewhere at some time, everyone has seen the quilted cotton oven mitt that's charred, worn through and flaking away with every use. There's no way to clean it and no way to make it safe! All products are designed to inhibit the growth of bacteria, and prevent scorching as well as the absorption of liquids, grease and steam.

It's About Service

Protect your investment...

We customize the Tucker Safety Products relationship for each client and address every burn and cut safety risk in the operation. We focus our unique brand and expertise on the food service industry. Our services and processes determine which products are the best fit, literally and figuratively. We'll customize solutions for your operation.

It's About Savings

Protect your profits...

Inexpensive products don't perform or last long enough to justify their lower invoice cost or higher annual expense. They also put your employees and customers at risk.

Every oven mitt Tucker Safety Products makes is guaranteed to last a minimum of 10 times longer than a Cotton Quilted Mitt.

Tucker Safety Products will save you money!

Products that Protect

Tucker Safety Products, Inc. holds several Trade Marks which serve to promote and protect its market position and products. Some of the more important among them are:

BurnGuard® Effective Protective Apparel, a registered federal trademark, is the name under which we market all products which are equipped with Tucker Safety Product's VaporGuard® effective liquid and vapor barrier.

VaporGuard® Barrier is the trade name for our proprietary effective liquid and vapor barrier. This material prevents hot liquids (boiling water, hot oil, hot grease) from reaching the skin of the wearer. It will not burn, melt, crack, turn brittle or otherwise break down when exposed to 500° F. temperatures for extended periods of time.

Blue & Yellow® trademark is our exclusive color combination for oven mitts, gloves and protective apparel, which protect against heat, flame, steam and hot liquids. This assures that, when you see Blue & Yellow® protective apparel, you can be sure that you are buying authentic BurnGuard™ effective protective apparel.

GussetGuard™ Protector is the name of the Kevlar® gusset insert we place between the thumb and index finger on all our Conventional-style Oven Mitts. Experience shows that this crotch area receives the harshest treatment during the life of the mitt, and the GussetGuard™ protectors are specifically designed to increase the longevity of our Conventional-style mitts.

QuickKlean™ is a process which we can apply to any BurnGuard® product. The QuickKlean™ process makes the product easy to clean. Just rinse exterior or interior with sanitizing agent and use again immediately. No need for on-site laundry facilities.

SafeStep™ Program is the name of the Safety Training, Burn and Cut Injury Prevention program developed by Tucker Safety Products and offered to clients as a front-line defense against burn and cut injuries. Under this program, Tucker Safety Products' representatives visit the client site and analyze burn injury history, facility layout, traffic patterns and "hot spots" as well as equipment in use and protective apparel in use. The team then formulates recommendations concerning facility design, equipment in use and protective apparel in use in order to minimize the risk of future burn injury. The team also instructs managers and staff in burn injury dangers and safety practices. Tucker Safety Products continues to monitor injuries on an ongoing basis, and makes further recommendations as necessary.

Tucker Safety Products is the first manufacturer of Oven Mitts used in Commercial Foodservice to receive NSF Protocol Certification.

www.burnguard.com/certification.htm

MOST IMPORTANT COMPONENTS TO "OVEN MITT" BURN INJURY PREVENTION:

The three major components of all thermal protective apparel, in their order of **importance**, are: **Liquid/Vapor Barrier, Insulation, and Outer Shell Fabric.**

- An effective **Liquid/Vapor Barrier** is the most important component of burn injury prevention because the majority of Foodservice Industry burns are caused by hot liquids, grease and/or steam.
- **Insulation** is the second most important component of burn injury prevention for the Foodservice Industry because burns caused by contact with hot surfaces are the second leading cause of injury.
- The **Outer Shell Fabric** is the third most important component of burn injury prevention because it is mostly a determining factor of the longevity of the protective apparel.

All Nomex® and Kevlar® products are flame safe.

Insulation value when held for 15 seconds or less when used with proper liner and outer shell.

Products which protect from hot liquids and grease.

Products which protect from steam and chemical vapors.

Products safe for machine washing.

Products designed to rinse clean and use again immediately.

Guaranteed durability comparison to conventional products.

SteamGlove & SiliGlove

BurnGuard® Seam Sealed Products

- Ideal for applications that require a liquid barrier and are exceptionally easy to clean.
- The Interchangeable Liner series provides additional sanitation and cost savings by allowing removal, cleaning and replacement of the liner alone, which is held in place with hook and loop fastener.

Tucker Safety Products' SteamGlove™ hand protection was designed and developed for the Commercial Kitchen to provide safe and sanitary protection to employees that are working around lower temperature, wet and messy applications.

- Watertight knit-lined SteamGuard™ barrier glove will offer excellent protection from a wide array of chemicals, hot water and liquids that can pose a danger.
- Rough finish texture that delivers a SureGrip™ in even the most oily and wet applications.
- Offers flexibility and dexterity not found in any other glove available.
- Interlock liner offers an added degree of comfort and liner protection.
- Made from ingredients that are in compliance with FDA's 21 CFR, parts 170 to 199, which means it is ideal for food handling and preparation.

SteamGlove™ 20"

SiliGlove™

This product was developed and designed for commercial kitchen applications where the wearer will be exposed to wet and messy conditions at higher temperature ranges. It offers safe and sanitary protection while also providing sufficient dexterity to easily perform the task at hand (i.e. rotisserie).

- Most effective and accepted product on the market for rotisserie chicken.
- Removable and washable liner for increased sanitation and additional thermal protection.

Mitt and Glove Sizing

All BurnGuard® mitts and gloves are available in 12, 15, 18 and 24 inch lengths. Tucker Safety Products is the only company in the industry to size their oven mitts and gloves in small, medium and large sizes. Our standard size is medium. If there is a need for a smaller or larger size simply request the same style # as a small or large.

Washing

1. Exterior Cleaning Hand wash the mitt with soap and warm water or machine wash. You may use a soft scrub brush to remove soil. Return to work with mitt wet or machine dry.
2. Interior Cleaning (sewn in liner) Turn the mitt inside out and hand wash with soap and warm water or machine wash. Air or machine dry.
3. Interior Cleaning (removable liners) Remove liner and hand wash with soap and warm water or machine wash. Air or machine dry.

Go to: www.tuckersafetyproducts.com/washing_instructions.htm to download all product washing instructions.

QuickClean Washing Instructions

Exterior:

1. Use a warm, soapy cloth and wipe the outside of the mitt. Do not soak or submerge in or under water.

Interior:

2. Wipe inside of the mitt using warm, soapy water, rinse with sanitizing agent. Do not soak or submerge in or under water.
3. If the inside of the mitt is really dirty the inside can be pulled out.* This can be done by putting your hand in the mitt & holding onto the inside liner as you pull your hand out.
4. Once the inside is pulled out then wipe clean. Push the liner back in.
5. Continue pushing finger portion of the liner back into the mitt.
6. With a rinse cloth, wipe off any excessive soap from the interior and exterior of the mitt.

* Liner cannot be pulled out of 5-Finger or 3-Finger QuickClean™ gloves. Gloves will need to be inverted to clean inside.

Tips:

- Mitts should be wiped out at the end of each day and left to hang dry over night.
- Make sure all soap is wiped off the mitt.
- The mitts are not to be submerged in liquid.

Cut Protection Products

Tucker Safety Products also uses new technology to provide the highest level of cut protection while providing the thinnest most comfortable (best "HAND") glove available on today's market. The comfort of the glove also addressed end users concerns about loss of dexterity due to the bulkiness of competitive products. Our KutGloves do not use steel threads that can oxidize, break-off and fall into food or poke the wearer. Instead, we use Spectra fibers which allow us to provide the same levels of protection in a more comfortable/safer product.

Tucker Safety Products' KutGlove™

Foodservice operators experience an unnecessary amount of lacerations that result in injured employees, poor morale, lost time wages and considerable costs to management. Most cut injuries can easily be prevented with proper fitting and comfortable protective products. Tucker Safety Products designed the KutGlove™ with the end user in mind. Our KutGlove™ is available in seven sizes (XXSmall and XXLLarge available upon special order request) ensuring that the wearer has a protective product that will fit properly. Our research has repeatedly shown that given a properly sized and comfortable KutGlove™ employees will actually wear the protective product vs. when they are only provided with a one size fits most approach. (Imagine how many of us would actually wear shoes if they were only available in one size!)

The KutGlove™ is available in six colors that can be used as an aid to identify sizing, application, etc. Finally, Tucker Safety Products has taken another step to ensure sanitation by adding anti-microbial protection that will never wash or wear out of the KutGlove™.

- Drive employee compliance
- Wire free
- Increased dexterity
- Higher level of cut resistance
- Better fit and comfort
- 6 colors and 7 sizes (XXSmall and XXLLarge upon special order request)
- Custom digit configuration available
- CE tested and certified level 4 or 5 cut resistance
- Anti-microbial additive is NSF certified under standard 51
- Anti-microbial protection is guaranteed for the life of the glove
- Approved for direct food contact

KutGlove™ Medium Weight — 10 Gauge Level 5
